Introduction

Corporate Policy Review

A corporate policy is a set of rules that helps an organisation work properly, honestly and fairly. It guides employees and helps reduce risks.

Privacy Policy

A Privacy Policy explains how an organisation collects, uses, stores and protects personal information. It helps keep people's information safe and prevents misuse.

Google

Google is a technology company founded in 1998 by Larry Page and Sergey Brin. It provides services like Google Search, Gmail, YouTube and Google Maps. Google's Privacy Policy explains how it collects, uses and protects users' personal information. It also helps users manage and control their data.

Objectives

This case study helps to understand what a privacy policy is and why organisations need one. It explains the responsibilities of an organisation when collecting and handling personal information such as names, contact details, identification details and payment information. It also helps students understand data protection methods used to keep information safe from theft, misuse, loss and unauthorised access.

The unit helps identify common privacy risks such as data leakage, weak passwords, phishing, unauthorised access and improper sharing of information. It also explains how organisations can review and improve their existing privacy

policies and practices. Proper privacy and data protection practices help organisations protect their users, build confidence and maintain trust.

Principle and Standards of Data Protection

Data protection is based on certain principles that help organisations handle information safely and responsibly. These principles ensure that personal information is collected for proper reasons and is protected throughout its use.

- **Data Security**

  Data should be protected from theft, loss and unauthorised access by using proper security methods.

- **Proper Data Collection**

  An organisation should collect only the information that is necessary for its work.

- **Clear Purpose**

  The organisation should clearly explain why the personal data is being collected and how it will be used.

- **Consent**

  Users should be properly informed and their consent should be obtained when required before collecting or using their personal data.

- **Data Accuracy**

  Personal information should be correct and updated when necessary.

- **Safe Data Sharing**

  Personal information should be shared only for proper purposes and with suitable protection.

- **Access Control**

  Only authorised persons should be allowed to access important or sensitive information.

Privacy, Ethics and Governance Framework

Privacy, ethics and governance help an organisation handle personal information safely and properly. They make sure that data is protected and used responsibly.

- **Privacy**

  Privacy means keeping a person's personal information safe. Organisations should not misuse or share personal information without proper permission.

- **Ethics**

  Ethics means using information in a fair and honest way. Employees should not use personal information for their own benefit.

- **Governance**

  Governance means having proper rules for managing information. It also makes clear who is responsible for protecting the data.

- **Employee Responsibility**

  Employees should know and follow the organisation's privacy and security rules. Training helps employees handle personal information safely.

- **Security Measures**

  Organisations should use safety methods to protect information. Examples include strong passwords, access controls and secure storage.

- **Complaint and Reporting System**

  There should be a simple way to report privacy problems or data leaks. Quick reporting helps the organisation solve the problem quickly.

- **Regular Policy Review**

  Organisations should check their privacy policy regularly. This helps them find problems and update the policy when needed.

Policy Interpretation and Data Protection Analysis

Policy interpretation means understanding the privacy policy and knowing how to follow its rules while handling personal information. Data protection analysis means checking how an organisation collects, uses, stores and protects data to identify risks and weaknesses in its data protection system.

- **Data Collection Analysis**

  The organisation should check what information is collected and whether it is really necessary.

- **Purpose of Data Use**

  The organisation should check whether the information is used only for the purpose explained to the user.

- **Data Storage**

  The organisation should make sure that personal information is stored safely and protected from unauthorised access.

- **Access Management**

  Access to personal information should be limited to employees who need it for their work.

- **Third-Party Sharing**

  If information is shared with outside organisations, the sharing should be necessary, authorised and properly protected.

- **Identifying Risks**

  Common risks include weak passwords, phishing, unauthorised access, data leakage and poor security practices.

Company Reviewed

Google

Google is a multinational technology company founded in 1998 by Larry Page and Sergey Brin. It provides services such as Google Search, Gmail, YouTube, Google Maps, Google Drive and Android. Since Google handles large amounts of personal and business information, protecting data privacy is essential to its operations.

Google's Privacy Policy explains how the company collects, uses, stores, shares and protects personal information. The information collected includes names, email addresses, search history, location details, device information and online activities. Google uses this data to provide and improve services, offer personalised recommendations and detect security threats. Users can manage their privacy settings, review their activity, and export or delete certain information.

Importance in Modern Business

A Privacy Policy helps protect sensitive information, build customer trust, maintain the organisation's reputation and promote responsible data handling.

Impact on Employees

Google's Privacy Policy guides employees in handling personal information responsibly. It promotes confidentiality, data security and authorised access. It helps prevent the misuse and unauthorised sharing of information.

Impact on Customers

The policy helps customers understand how their personal information is collected and used. It allows them to manage privacy settings, review their activity, and export or delete certain data. This helps protect their privacy and build trust in Google's services.

Impact on Stakeholders

The policy promotes trust among stakeholders such as business partners, advertisers, investors and service providers. It explains how information is shared with third parties and supports responsible data handling, business relationships and the organisation's reputation.

Risk Management

Google's privacy and security measures, such as encryption, restricted access and security checks, help reduce the risks of data breaches, fraud, unauthorised access and financial loss.

Ethical Practices

The policy promotes transparency, confidentiality and responsible use of personal information. It helps ensure that users understand how their data is handled.

Compliance

Regular policy reviews and cooperation with regulatory authorities help Google follow applicable data protection laws and regulations.

Organisational Governance

The policy establishes guidelines for data collection, sharing, storage and security. It promotes accountability, responsible management and protection of stakeholder interests.

Preparing a Privacy Policy Review Report

A **Privacy Policy Review Report** explains the results of reviewing an organisation's privacy policy. It shows whether the policy is clear, effective, updated and properly followed.

- **Introduction**

  Give a short introduction about the organisation and the purpose of the review.

- **Policy Details**

  Mention the name, purpose and responsibilities related to the privacy policy.

- **Data Collected**

  Explain what personal information is collected and whether it is necessary.

- **Data Usage and Storage**

  Explain how the information is used and stored and whether proper security is provided.

- **Data Sharing**

  Check whether information is shared with third parties and whether such sharing is properly controlled.

- **Security Measures**

  Describe the methods used to protect personal information and identify any weaknesses.

- **Privacy Risks**

  Mention risks such as unauthorised access, data leakage, weak passwords and improper sharing.

- **Recommendations**

  Give suggestions to improve privacy, security, employee training and data handling.

Conclusion

Privacy Policy and Data Protection are important for organisations that handle personal information. A privacy policy explains what information is collected, why it is collected and how it is used, while data protection keeps the information safe. Organisations should follow proper privacy, ethical and governance practices. Regular policy reviews help identify weaknesses, reduce risks, improve security and build trust among customers, employees and other users.
